

**COOPER  
INSULATION**

## High Density Fibre Roll

### What is high density fibre roll Insulation?

It is a mineral wool insulation roll providing an excellent thermal and acoustic insulation for applications in all types of buildings. It is designed for applications where space is at a premium quality and a low U-value is required. This high density roll offers a thermal conductivity of 0.034W/mk.

### Application

It is designed for applications where space is at a premium and acquiring a low U-value is required, such as external walls, pitched roof/ attics and pitched roof rafters

### Benefits

A1 Reaction to Fire  
Classification

Sustainable  
process

Acoustic Insulation

Thermal Insulation

- Euroclass A1 reaction to fire in accordance with BS EN 13501-1.
- Manufactured from a sustainable process using recycled glass as an alternative to petro-based chemicals.
- It provides first-rate sound absorption features.
- Excellent thermal performance, improves comfort, and energy efficiency. It has a thermal conductivity of 0.034W/mK
