

**COOPER
INSULATION**

Eco-Friendly

Cooper Insulation offers eco-friendly products to our clients who wish to reduce their carbon footprint. We use both sheep wool and cellulose for a more sustainable alternative.

Today's eco-friendly insulation options offer impressive thermal performance while reducing energy consumption and minimizing harmful environmental impacts. Sustainable alternatives are revolutionizing green building practices and produce significantly lower carbon emissions during production.

Sheep Wool

Sheep wool is a unique insulation which is made 100% of sheep wool combined with recycled fibres. Like Cellulose, it is a long lasting product which contributes to a healthier indoor environment.

Eco Friendly

**Natural, safe, and
easy to install**

**Allergy Free and
Non-irritable**

**Reducing Carbon
Footprint**

Cellulose

Cellulose Fibre is manufactured from recycled newsprint which is shredded to be suitable for installation by blowing. The source paper in its raw state is combustible. However, during manufacturing, cellulose insulation is treated with borates, which are a Class I fire retardant.

Energy Efficient

**Natural, warm and
Fire Safe**

**Recycled
Newsprint**

**Tried and Tested
Product**

Specification
